+20-115-888-5496 | Cairo, Egypt | Military Status: Exempted

Summary

Computer Science graduate from Ain Shams University with practical exposure to SOC operations. Has gained hands-on experience through labs, cybersecurity projects, incident investigation, and digital forensics exercises. Consistently documents technical work and is committed to continuous learning in security operations and cybersecurity.

Education

Ain Shams University | Faculty of Computer and Information Sciences

2022 - 2026

Bachelor of Science (B.Sc.) in Information Systems

Experience

SOC Engineer Intern | ZeroSploit MEA

Dec 2025 - Jan 2026

- Developed an automated "Detection Coverage Lookup" tool that pulls active SIEM rules via API, uses AI to map missing MITRE ATT&CK techniques, and maintains a live coverage inventory in Google Sheets.
- Engineered an end-to-end autonomous vulnerability management workflow using n8n and Tenable Nessus, integrating AI agents to re-prioritize risks and execute approved Linux remediation commands via SSH/MCP, while maintaining a human-in-the-loop approval process through Telegram
- Deployed and configured Microsoft Sentinel within an Azure environment, establishing automated log ingestion from Palo Alto's firewall via Azure Monitor Agent.

IT Technical Support Intern | ElSewedy Industries (EMAS)

Jul 2025 - Aug 2025

- Provided technical support to employees, resolving software and hardware issues.
- Assisted in Active Directory management, including user account creation and troubleshooting domain-related issues to support user access and system performance.
- Assisted in the deployment and configuration of workstation images, ensuring all new hardware was integrated into the domain environment according to established security protocols.

Training

SOC Analyst Trainee | WE Innovate X ZeroSploit Bootcamp

Aug 2025 - Sep 2025

- Conducted deep-dive investigations in ELK, performing log correlation and timeline analysis to reconstruct multi-stage adversary attacks and identify initial access vectors
- Deployed and managed an ELK Stack and engineered data ingestion pipelines using Winlogbeat and Sysmon to monitor remote Windows endpoints.
- Performed static and dynamic analysis of Windows and Linux malware using FlareVM, utilizing PEStudio, Floss, and Strings to extract IOCs for SIEM integration.

Fortinet Cybersecurity | National Communications Institute (NTI & ITIDA)

Jul 2025 – Aug 2025

- Completed a 120-hour cybersecurity program with Fortinet, including 90 hours technical training on FortiGate firewalls, IPS, VPNs, and network security fundamentals.
- Gained practical experience configuring and securing network infrastructures using Fortinet tools.

Cisco's Cybersecurity CyberOperations | National Communications Institute (NTI)

Apr 2025 – Jul 2025

- Completed intensive cybersecurity training totaling 72 hours with hands-on labs, threat detection, incident response, and security operations fundamentals aligned with Cisco's CyberOps curriculum.
- Covered SOC workflows, network security, cyber defense techniques, and practical exercises.

- Completed a 360-hour SOC diploma covering core infrastructure and security courses including CCNA 200-301, Windows Server 2019 (MCSA), Linux Administration I, and Fortinet NSE4 Firewall.
- Covered advanced SOC and cyber defense courses such as CEH v13, Incident Response (eCIR), Digital Forensics (eCDFP), and SIEM operations using IBM QRadar and Splunk.

Projects

- WebPatcher: Patch Recommendation Agent for WebApp Vulnerabilities | [Github](#)
- Cybersecurity Lab Write-Ups – Technical Blogging | [Medium Blog](#) | [Gitbook](#)
- Deploying Cowrie Honeypot with Prometheus Monitoring and Slack Alerting | [Github](#)
- Detection-to-Response SOC Pipeline Using Wazuh, n8n, and TheHive | [Github](#)
- Automated Detection Coverage Lookup To MITRE ATT&CK | [Github](#)
- Autonomous Vulnerability Discovery & Remediation using Nessus, AI Agents, and MCP | [Github](#)
- Elastic's Ingestion pipeline using API & Threat Detection Rules | [Github](#)
- ELK Stack Setup | [Github](#)
- Cryptographic Algorithms using C# | [Github](#)

Courses & Books

- CCNA - CyberOps Associate
- CEH – eCIR - eCDFP
- Fortinet NSE 4 FortiOS Firewall
- Microsoft Certified Systems Administrator: Microsoft Windows Server (MCSA)
- SOC L1 Pathway (Legacy and Updated) – TryHackMe
- Advanced Endpoint Investigation Pathway – TryHackMe
- Splunk: Blue Team Academy Cyber Defense Analyst Pathway
- SANS SEC450
- Effective Threat Investigation for SOC analysts by Mostafa Yehia

Technical Skills & Tools

- **Log Management:** Configuring Log Shippers and building Ingestion Pipelines for endpoints.
- **Detection Engineering:** Designing Threat Detection Rules and alert logic mapped to the MITRE ATT&CK Framework.
- **Security Operations & Incident Response:** Security monitoring, alert triage, incident investigation, and escalation following SOC workflows and playbooks.
- **Malware Analysis & Digital Forensics:** Basic static and dynamic malware analysis. File system, memory, and network forensics.
- **Threat Intelligence:** Using open-source threat intelligence to support alert investigation, contextualize attacker behavior, and improve detection coverage.
- **Technical Documentation & Reporting:** Writing clear investigation notes, detection documentation, and lab reports to support knowledge sharing and incident tracking
- **Security Automation & SOAR Concepts:** Building automated security workflows using n8n and LangChain for security analysis, enrichment, and automation tasks
- **Network & Infrastructure Security:** Firewall configuration (FortiGate) and IDS/IPS rules.
- **Systems Administration:** Windows Server and Active Directory administration.
- **SIEM Tools:** Splunk / ELK / Q-Radar / Wazuh
- **Programming Languages:** C++ / Java / JavaScript /Python
